RAIL.ONE PRESENTS ITS BALLASTLESS RHEDA 2000® AND RHEDA CITY SYSTEMS AT THE ELMIA NORDIC RAIL 2019

Neumarkt (Germany)/Jönköping (Sweden), October 9, 2019 – Innovative and reliable solutions have always been an important facet of RAIL.ONE's product portfolio. RAIL.ONE and its Swedish cooperation partner S:t Eriks AB are jointly displaying their product range at the booth B03:34 in Hall B at the Elmia Nordic Rail exhibition 2019, the most important railway and transport trade fair in the Nordic countries. This year, RAIL.ONE focusses on its modular Urban Transit track system RHEDA CITY, implemented for example at the Bybanen Airport Link in Bergen, Norway.

The two companies started their partnership in 2017 and are committed to jointly manufacture and deliver innovative slab track solutions for high-speed lines, tunnel and bridge projects as well as for the expanding Nordic Urban Transit market. One of the highlights this year is an exhibit of the RHEDA CITY system, which has been installed in various projects all over Europe, and a few years ago, in the Bybanen Airport Link extension in Bergen or in Tampere, Finland. The RHEDA CITY system is especially designed for mass urban transit, especially in applications for trams, light rail systems and surface commuter lines. The RHEDA CITY track system is characterized by a simple construction methodology, as well as an easily adaptable bi-block sleeper design while providing and maintaining a precise track gauge during all stages of installation and its entire life cycle.

Thanks to an interactive application displayed at the booth, interested visitors can learn about RAIL.ONE's solutions in the four business segments: long distance and freight transport, urban transit, engineering and plant construction as well as discovering the company's worldwide customer references.

S:t Eriks and RAIL.ONE welcome interested visitors to the booth B03:34.

About S:t Eriks

S:t Eriks is the leading Swedish supplier of natural stone and concrete elements with great expertise and the widest and deepest product range in the market.

About the PCM RAIL.ONE Group

The PCM RAIL.ONE Group has been manufacturing concrete sleepers and track systems for urban transit and long-distance rail transportation for over 60 years. The technology leader also offers its expertise in the fields of engineering and plant construction. Its customer-driven innovations fulfill the highest quality standards and are installed around the world.

The PCM RAIL.ONE Group is comprised of several companies and eleven production facilities with a presence in Germany, Romania, Saudi Arabia, Spain, South Korea, Hungary, Turkey, the United States, and India. It maintains annual capacities of over 5 million track sleepers and 930,000 linear meters of turnout sleepers. RAIL.ONE produces optimized products and custom solutions with over 800 employees around the world.
